

Neev API

Everything you need to call the KYC and identity verification endpoints below — one base URL, one authentication header, and a consistent request and response shape across all of them.

POST only auth: x-api-key JSON body

① Base URL

Every endpoint on this page is appended to:

```
https://apis.coincircletrust.com/api/v1/apiProduct
```

② Authentication

Send your key on every request as an HTTP header — never in the query string or body.

```
x-api-key: <YOUR_API_KEY>
```

③ Request body

Send fields flat, at the top level of the JSON body:

```
{
  "aadhaar_number": "555555555555"
}
```

An older `{ "documentData": { ... } }` wrapper is still accepted for backward compatibility — it's unwrapped automatically — but new integrations should send the flat form shown above and in every example on this page.

④ Response envelope

Every call — success, business no-match, or error — returns this shape:

```
{
  "success": true,
  "message": "success",
  "data": { },
  "html": null,
  "requestId": "...",
  "timestamp": "..."
}
```

Reading a result

The single most common integration mistake against this API is treating a **no-record result** as an error. It isn't one. When a vendor answers successfully but has nothing to return — an Aadhaar that exists but isn't linked to a PAN, for example — the platform still replies **HTTP 200** with `success: true` and a message ending in *"...call successful, but no records found."* Check data for content, not the HTTP status, before deciding a lookup came back empty.

5 Error codes

STATUS	MEANING
401	Missing or invalid <code>x-api-key</code> .
404	Unknown or deactivated slug — not "no record found."
422	Request body failed field validation; the response lists which fields.
402	Wallet balance or quota exhausted.
403	This API catalogue isn't enabled for your organisation.
429	Rate limit exceeded — see below.
500	Unexpected server error; retry after a short delay.

6 Rate limits

A single global limit applies across every endpoint, keyed per source IP:

Window	10 minutes
Limit	1,000 requests
On breach	429 until the window rolls over

Back off and retry rather than hammering the endpoint immediately after a 429.

Endpoint catalogue

All __TOTAL__ endpoints currently active in production, grouped as below and detailed one by one further down the page.

Migrating from an older integration

If your integration still calls one of the paths on the left, it keeps working — the platform rewrites it to the canonical slug on the right before processing. New integrations should call the canonical form directly, since these compatibility rewrites are not guaranteed to be maintained indefinitely.
